DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed on December 27, 2006 has been considered.

Drawings

Figures 1 and 3-7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-13 are allowed.

Reasons for Allowance

Claims 1-13 are allowed since there is no prior art of record that teaches or suggests a flat panel display having a matrix-type array of sub-pixels comprising a relationship of various elements as claimed with the specific allowable subject matter cited in the following claims:

Claim 1:

- the driving thin film transistor comprises semiconductor channels, which are derived from a semiconductor layer
- heterogeneous straight lines are separated from each other on the semiconductor layer
- wherein at least one of the semiconductor channels comprise at least one of the heterogeneous straight lines
- an imaginary line connecting the semiconductor channels of one column is not parallel to the heterogeneous straight lines

Claim 10:

- the driving thin film transistor comprises semiconductor channels, which are derived from a semiconductor layer
- heterogeneous straight lines are separated from each other on the semiconductor layer
- wherein each of the semiconductor channels comprises at least one of the heterogeneous straight line

Claims 2-9 and 11-13 are allowed since they depend on the allowed claims 1 and 10, respectively.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Admission discloses the driving thin film transistor comprises semiconductor channels, which are derived from a semiconductor layer, wherein

heterogeneous straight lines appear randomly in the semiconductor channels, and wherein an imaginary line connecting the semiconductor channels of one column is parallel to the heterogeneous straight lines.

Masumitsu et al (JP 10-012891) discloses crystal defect in channel field. However, the crystal defect is not in each channel field (as in "prior art" discussion). Masumitsu et al further discloses boundary appears between each exposure field when doing laser beam irradiation. However, with final product, there is no crystal defect included to the channel fields (as in "current invention" discussion).

Ohtani et al (U.S. Patent No. 6,303,963) discloses the semiconductor channels in thin film transistors formed from semiconductor layer after being crystallized.

Komiya et al (U.S. Patent No. 6,456,013) discloses an imaginary line connecting the semiconductor channels of one column is not a straight line.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
